

## **Finish Options Guide**

### Stain finishes:

Stains can be applied to solid or veneered wood surfaces. Stain finishes allow the natural beauty of the wood grain to remain visible, producing a richly nuanced and extremely durable finish. Most of our products are produced in maple or oak veneer, however all species of wood are available.

### Laminate finishes:

Laminate refers to high-pressure laminate or "HPL". These surfaces provide a very durable finish ideal for horizontal work surfaces in an endless array of colors, wood grains, and patterns. We work primarily with Formica, Pionite and Wilson Art brands, but all standard and specialty laminates are available.

### Melamine finishes:

Melamine, or low-pressure laminate, is another type of decorative surface that is a more economical alternative to HPL, with good durability in most applications. A variety of solid and wood grain colors are available. Entry level pricing for most of our fixtures is based on white melamine finish.

### Paint finishes:

Paint finishes are ideal for exact matching of colors, especially on irregular surfaces. Paints can also be economical when applied to MDF and other less expensive substrates. Paint finishes can be easily touched-up during the life of your fixtures.

### Custom finishes:

Fine faux finishes have been a Cormans specialty for many years. Faux stone and brick, printed graphics, antique woods and more are available on most of our products. Just ask! Pricing will vary depending on the complexity of the finish and the base materials used.

### The color Green:

Cormans offers renewable, recyclable and sustainable materials for all projects to assist you in meeting LEEDS qualifications, or your company's environmental initiatives. Simply let us know your project and material requirements, and we'll be happy to work with you.
